

CLIENT SEO AUDIT

Kiwi Widgets

127.0.0.1 · 02 October 2026

70 / 100

Overall audit score

TECHNICAL SEO	CONTENT SIGNALS	AI SEARCH READINESS
75/100	70/100	63/100 Moderate

We reviewed 9 pages of 127.0.0.1 and found 24 items for review (0 critical, 6 high, 6 medium, 12 low). The overall audit score is 70/100 (technical 75, content 70, AI search readiness 63 – Moderate). The highest-priority finding is: broken internal links. Scores are automated heuristics based on a limited crawl and are intended to support professional review.

Audit heuristic — not a Google ranking score.

Audit results are automated heuristics intended to support professional review. They are not search-engine rankings or guarantees.

Executive summary

Top findings

Priority	Finding	Affected
HIGH	Broken internal links – 3 internal URLs return an error status, referenced by 3 links on the crawled pages.	3
HIGH	Missing title tags – 1 page has no title element.	1
HIGH	Pages carry a noindex directive – 1 crawled page sets noindex via meta robots or X-Robots-Tag.	1
HIGH	Redirect loops – 1 URL could not load because of a redirects loop or too many redirects.	1
HIGH	Server errors (5xx) returned – 1 crawled URL responded with a 5xx server error.	1

Top recommendations

1. Fix 3 broken internal URLs (3 links)
2. Add title tags to 1 page
3. Review noindex on 1 page
4. Fix redirect loops on 1 URL
5. Resolve server errors on 1 URL

Audit scope

12 URLs crawled (9 analysed as HTML pages). robots.txt: found. XML sitemap: found. The crawl is a limited sample of the site, so findings describe the pages reviewed rather than every URL.

Technical SEO

75

Technical SEO score – Fair

Audit heuristic — not a Google ranking score.

Score breakdown

Check	Points	Observation
Page availability	15 / 20	9 of 12 crawled URLs returned a normal HTML page (HTTP 200).
Indexability (noindex)	13.3 / 15	8 of 9 pages have no noindex directive.
Canonical tag present	0.8 / 7	1 of 9 pages declare a canonical URL.
Canonical not pointing elsewhere	3 / 3	0 page(s) declare a canonical URL different from their own address.
Title tag present	4.4 / 5	8 of 9 pages have a title.
Meta description present	3.9 / 5	7 of 9 pages have a meta description.
Title and description unique	3.9 / 5	2 page(s) share a title or description with another crawled page.
H1 heading	8.9 / 10	1 page(s) without an H1; 0 with more than one (half credit).
Internal links not broken	4.4 / 6	3 of 11 internal URLs checked returned an error.
No orphan-like pages	3.5 / 4	1 crawled page(s) received no internal link from the other crawled pages.
Images with alt attribute	2.5 / 5	8 of 16 images (50.0%) have an alt attribute.
robots.txt present	4 / 4	robots.txt found.
XML sitemap present	4 / 4	Sitemap found (3 URLs).
Sitemap referenced in robots.txt	2 / 2	robots.txt references a sitemap.
Site served over HTTPS	0 / 3	Homepage final URL is HTTP.
No mixed-content indicators	n/a	Not applicable (no pages to evaluate)

Issues

HIGH	Broken internal links
FOUND	3 internal URLs return an error status, referenced by 3 links on the crawled pages.
WHY IT MATTERS	Broken internal links can prevent users and crawlers from reaching intended content and waste crawl effort.
RECOMMENDED ACTION	Review the affected URLs and update or remove the broken links, or redirect the old URLs.
EXAMPLES	127.0.0.1:45189/broken-server, 127.0.0.1:45189/missing, 127.0.0.1:45189/redirect-loop
HIGH	Missing title tags
FOUND	1 page has no title element.
WHY IT MATTERS	The title is a primary on-page signal and often the headline shown in search results.
RECOMMENDED ACTION	Write a unique, descriptive title for each of these pages.
EXAMPLES	127.0.0.1:45189/notitle

HIGH	Pages carry a noindex directive
FOUND	1 crawled page sets noindex via meta robots or X-Robots-Tag.
WHY IT MATTERS	Pages marked noindex are asked not to appear in search results. This is correct for private or utility pages, but harmful if applied to pages meant to attract traffic.
RECOMMENDED ACTION	Confirm each of these pages is meant to be excluded; remove noindex from any that should be indexed.
EXAMPLES	127.0.0.1:45189/private
HIGH	Redirect loops
FOUND	1 URL could not load because of a redirects loop or too many redirects.
WHY IT MATTERS	Looping URLs cannot be loaded by users or crawlers.
RECOMMENDED ACTION	Fix the redirect rules for these URLs.
EXAMPLES	127.0.0.1:45189/redirect-loop
HIGH	Server errors (5xx) returned
FOUND	1 crawled URL responded with a 5xx server error.
WHY IT MATTERS	Server errors make content unavailable to users and crawlers and can reduce how often a site is crawled.
RECOMMENDED ACTION	Check server logs for these URLs and fix the underlying errors.
EXAMPLES	127.0.0.1:45189/broken-server
HIGH	Site is not served over HTTPS
FOUND	The homepage resolved to http://127.0.0.1:45189/.
WHY IT MATTERS	HTTPS protects users, is a lightweight ranking signal, and browsers warn on insecure pages.
RECOMMENDED ACTION	Install a certificate and redirect all HTTP URLs to HTTPS.
EXAMPLES	127.0.0.1:45189

8 further lower-priority item(s) are listed in the web app.

Page-level findings

URL	Status	Canonical	Robots	H1s	Alt gaps
127.0.0.1:45189	200	self	index	1	1
127.0.0.1:45189/about	200	none	index	1	1
127.0.0.1:45189/contact	200	none	index	1	1
127.0.0.1:45189/services	200	none	index	0	1
127.0.0.1:45189/blog/first-post	200	none	index	1	1
127.0.0.1:45189/missing	404	-	-	-	-
127.0.0.1:45189/redirect-loop	error	-	-	-	-
127.0.0.1:45189/thin	200	none	index	1	1
127.0.0.1:45189/notitle	200	none	index	1	0
127.0.0.1:45189/broken-server	500	-	-	-	-
127.0.0.1:45189/private	200	none	noindex	1	1
127.0.0.1:45189/orphan	200	none	index	1	1

First 12 URLs shown; all pages are listed in the appendix.

Content signals

70

Content score – Fair

Audit heuristic — not a Google ranking score.

Score breakdown

Check	Points	Observation
Title quality (length)	14.4 / 20	5 of 9 titles are 20–65 characters; others get partial or no credit.
Meta description quality (length)	13.3 / 20	5 of 9 descriptions are 70–165 characters; others get partial or no credit.
H1 present	8.9 / 10	8 of 9 pages have an H1.
Subheadings on text-rich pages	4.3 / 10	3 of 7 pages with 150+ words use H2 subheadings.
Content depth signals	16 / 25	Median 151 words per page; 2 page(s) under 150 words. Word count is a signal, not a quality verdict.
Internal linking	13.3 / 15	8 of 9 pages link to at least 3 other internal URLs.

Issues

HIGH	Missing title tags
FOUND	1 page has no title element.
WHY IT MATTERS	The title is a primary on-page signal and often the headline shown in search results.
RECOMMENDED ACTION	Write a unique, descriptive title for each of these pages.
EXAMPLES	127.0.0.1:45189/notitle
MEDIUM	Duplicate title tags
FOUND	2 pages share a title with another crawled page.
WHY IT MATTERS	Identical titles make it harder to distinguish pages for users and search engines.
RECOMMENDED ACTION	Give each page a title that reflects its specific topic.
EXAMPLES	127.0.0.1:45189/services, 127.0.0.1:45189/thin
MEDIUM	Missing meta descriptions
FOUND	2 pages have no meta description.
WHY IT MATTERS	Search engines may write their own snippet, but a good description gives you control over how the page is summarised and can influence click-through.
RECOMMENDED ACTION	Write a concise, page-specific description (roughly 70–160 characters) for each page.
EXAMPLES	127.0.0.1:45189/thin, 127.0.0.1:45189/notitle
MEDIUM	Pages with very little visible text
FOUND	2 pages have fewer than 50 words of visible text in the main content.
WHY IT MATTERS	Pages with minimal text give search engines little to interpret. Some page types (galleries, tools, contact pages) legitimately have little text, and content loaded by JavaScript is not visible to this tool.
RECOMMENDED ACTION	Review recommended: confirm whether these pages need more descriptive content or are rendered by JavaScript.
EXAMPLES	127.0.0.1:45189/contact, 127.0.0.1:45189/thin

MEDIUM**Pages without an H1**

FOUND

1 page has no H1 heading.

WHY IT MATTERS

The H1 usually states the main topic of the page and helps users and crawlers understand it.

RECOMMENDED
ACTION

Add one clear H1 to each of these pages.

EXAMPLES

127.0.0.1:45189/services

LOW**Longer pages without subheadings**

FOUND

4 pages with 150+ words have no H2 headings.

WHY IT MATTERS

Descriptive subheadings help readers scan a page and make its structure clearer to machines.

RECOMMENDED
ACTION

Consider breaking longer content into sections with descriptive H2 headings.

EXAMPLES

127.0.0.1:45189/services, 127.0.0.1:45189/notitle, 127.0.0.1:45189/private (+1 more)

3 further lower-priority item(s) are listed in the web app.

Page-level findings

URL	Words	Title chars	Desc chars	H2	Int. links	Ext. links	Images
127.0.0.1:45189	318	40	91	2	11	1	2
127.0.0.1:45189/about	154	5	32	1	3	0	2
127.0.0.1:45189/contact	11	32	93	0	3	0	2
127.0.0.1:45189/services	150	8	6	0	3	0	2
127.0.0.1:45189/blog/first-post	308	42	84	2	3	0	2
127.0.0.1:45189/thin	6	8	0	0	3	0	2
127.0.0.1:45189/notitle	153	0	0	0	0	0	0
127.0.0.1:45189/private	151	35	111	0	3	0	2
127.0.0.1:45189/orphan	151	40	81	0	3	0	2

Word count is a signal for review, not a verdict on page quality.

AI search readiness

63

AI search readiness (internal heuristic) – Moderate

Audit heuristic — not a Google ranking score.

This section reviews observable signals that may help content be understood and attributed. It does not predict whether any AI system or search engine will rank, retrieve or cite the site.

Observable signals

Signal	Observed	Detail
Structured data (JSON-LD)	Yes	1 of 9 pages. Types: Organization, WebSite.
Clear business identity	Yes	'Kiwi Widgets' appears in the homepage title/H1/og:site_name.
Consistent business information	Yes	Organisation name in schema is consistent ('Kiwi Widgets').
About information	Yes	http://127.0.0.1:45189/about
Contact information	Yes	Contact page: yes; details on page/in schema: yes.
Descriptive headings	Partial	2 of 7 text-rich pages.
Descriptive page content	Partial	Median 151 words per page.
FAQ-style content	Yes	1 page(s).
Author information	No	0 of 1 article-like pages.
Source / citation references	No	0 of 1 article-like pages.
Internal linking	Yes	8 of 9 pages with 3+ internal links; 1 orphan-like.

Score breakdown

Check	Points	Observation
Structured data coverage	1.7 / 15	1 of 9 pages have parseable JSON-LD.
Organisation / WebSite entity markup	10 / 10	Organization/LocalBusiness markup: yes; WebSite markup: yes.
Business name on homepage	8 / 8	'Kiwi Widgets' found in the homepage title, H1 or og:site_name.
Organisation name in structured data	7 / 7	Organisation name in schema is consistent ('Kiwi Widgets').
Business name consistent in titles	1.7 / 5	'Kiwi Widgets' appears in 3 of 9 page titles.
About page	5 / 5	About page link found (http://127.0.0.1:45189/about).
Contact page	5 / 5	Contact page link found (http://127.0.0.1:45189/contact).
Contact details visible	5 / 5	Email, phone, address or contact markup detected.
Descriptive heading structure	2.9 / 10	2 of 7 text-rich pages have an H1 plus at least two subheadings.
Descriptive page content	3 / 5	Median visible word count is 151 (full credit at 300+).
FAQ-style content	5 / 5	FAQ-style content or FAQPage markup on 1 page.
Author information on articles	0 / 5	0 of 1 article-like pages show author information.
Source references on articles	0 / 5	0 of 1 article-like pages link to external sources.
Internal link coverage	4.4 / 5	8 of 9 pages have 3+ internal links.
Pages reachable via internal links	4.4 / 5	7 of 8 pages are linked from another crawled page.

Recommendations

MEDIUM	Malformed JSON-LD found
FOUND	1 page contains JSON-LD that could not be parsed.
WHY IT MATTERS	Markup that cannot be parsed is ignored by consumers of structured data.
RECOMMENDED ACTION	Validate the JSON-LD (for example with Google's Rich Results Test or schema.org validator) and correct syntax errors.
EXAMPLES	127.0.0.1:45189/services
LOW	Some pages have no structured data
FOUND	8 crawled pages of 9 have no JSON-LD.
WHY IT MATTERS	Consistent structured data can help machines interpret the type and purpose of each page. Not every page type needs it.
RECOMMENDED ACTION	Review which of these pages would benefit from relevant markup (for example Article, Product, Service or BreadcrumbList) and add it where it accurately describes the page.
EXAMPLES	127.0.0.1:45189/about, 127.0.0.1:45189/contact, 127.0.0.1:45189/services (+5 more)
LOW	Text-rich pages with limited heading structure
FOUND	5 pages have 150+ words but lack an H1 or at least two subheadings.
WHY IT MATTERS	Clear, descriptive headings break content into topics that are easier for people and machines to interpret and quote accurately.
RECOMMENDED ACTION	Add an H1 and descriptive subheadings that name the topics the page covers.
EXAMPLES	127.0.0.1:45189/about, 127.0.0.1:45189/services, 127.0.0.1:45189/notitle (+2 more)
LOW	Articles without outbound source references
FOUND	1 article-like page links to no external sources.
WHY IT MATTERS	Where claims or statistics are used, citing sources supports credibility and verifiability.
RECOMMENDED ACTION	Reference reputable sources for factual claims where relevant.
EXAMPLES	127.0.0.1:45189/blog/first-post
LOW	Articles without visible author information
FOUND	1 article-like page shows no author or byline.
WHY IT MATTERS	Named authors with credentials help readers judge expertise and give systems a clear source to attribute.
RECOMMENDED ACTION	Add bylines (and author pages or Person markup) to articles where authorship matters.
EXAMPLES	127.0.0.1:45189/blog/first-post

Appendix

Scoring methodology

Item	Method
Overall	Technical × 40% + Content × 30% + AI Search × 30%
Category score	Sum of points earned by each check ÷ sum of points available, × 100. Checks that do not apply to the site are excluded, not scored as failures.
Per-check points	Most checks award points in proportion to the share of crawled pages that pass.
Audit heuristic — not a Google ranking score. The AI search readiness score is an internal heuristic, not a scientifically validated ranking metric.	

Page-level audit table

URL	Status	Words	Title	Desc	H1	Canon.	Schema	Flags
127.0.0.1:45189	200	318	Y	Y	1	Y	Y	1
127.0.0.1:45189/about	200	154	Y	Y	1	N	N	5
127.0.0.1:45189/contact	200	11	Y	Y	1	N	N	4
127.0.0.1:45189/services	200	150	Y	Y	0	N	N	9
127.0.0.1:45189/blog/first-post	200	308	Y	Y	1	N	N	3
127.0.0.1:45189/missing	404	-	N	N	0	N	N	1
127.0.0.1:45189/redirect-loop	err	-	N	N	0	N	N	1
127.0.0.1:45189/thin	200	6	Y	N	1	N	N	7
127.0.0.1:45189/notitle	200	153	N	N	1	N	N	6
127.0.0.1:45189/broken-server	500	-	N	N	0	N	N	1
127.0.0.1:45189/private	200	151	Y	Y	1	N	N	5
127.0.0.1:45189/orphan	200	151	Y	Y	1	N	N	5

Crawl notes

- 127.0.0.1:45189/missing returned HTTP 404.
- We couldn't access 127.0.0.1:45189/redirect-loop (The page redirects in a loop or through too many redirects.). The audit will continue with the pages that were successfully retrieved.
- 127.0.0.1:45189/broken-server returned HTTP 500.

Audit results are automated heuristics intended to support professional review. They are not search-engine rankings or guarantees.
